INDEPENDENT MOBILITY ADVANCE SALES' SYSTEMS

The ticket sales and associated revenues of public transport companies come with enormous expenses. Not only distribution costs, but also administrative and operating costs, must be covered in the long term. For this reason, ticket sales are an existential task for transport companies. With the UFHO system, AMCON offers an innovative software solution that actively supports public transport companies in generating revenue through advance sales' systems.

SAFE AND EASY SALES WITH THE UFHO SALES SYSTEM

Advance sales are strikingly easy with the UFHO sales system, which consists of proven PC-based hardware components and the powerful UFHO sales application. This combination offers transport companies a comfortable, multi-rate, and safe sale of tickets.

The employee at the advance sale system is automatically offered a suitable ticket with the timetable information. In addition, special features such as what is covered by the ticket or specific ticket groups can be displayed to the seller. To accelerate the sales process even further, the best-selling products are displayed as favorites. In addition, the advance sales' system is suitable as a commercial POS system, which means fixed-price tickets or complementary products such as souvenirs can be easily sold in combination. The parking of documents or the control of various external components, such as additional receipt printers, cash drawers or payment terminals are, of course, part of the functionality.

ADVANCE SALES ALSO ONLINE VIA WEB-BASED INFORMATION SERVICE

The UFHO Advance Sales module enables the maintenance of master data directly via the presale device. Inventory management of souvenir items can also be carried out via the UFHO module to prevent bottlenecks from occurring and to ensure reorders can be placed in good time.

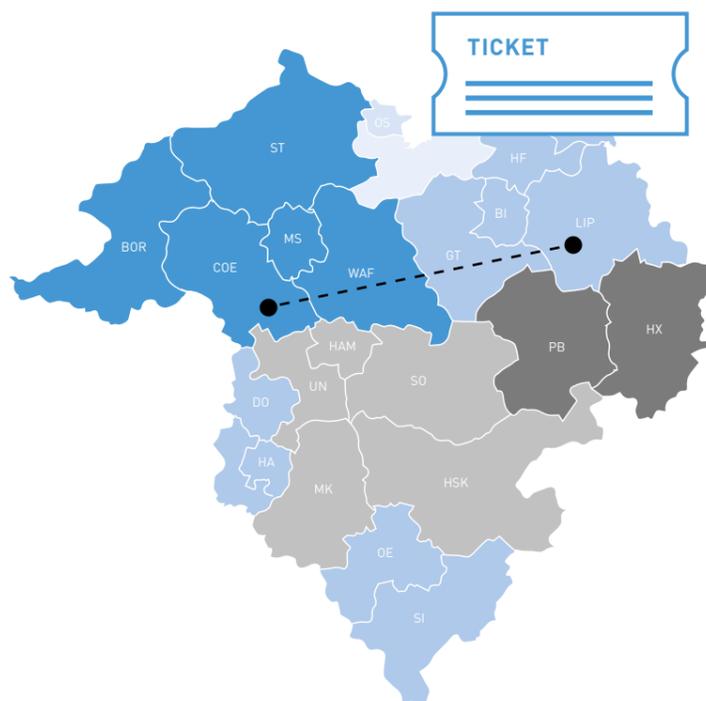

The data exchange with the UFHO background system is configured individually, and the sales functions are also available offline. After the cash shift has been completed, various sales analyses can be called up and created in the background system with the statistics module. Of particular importance are cash register security and tamper-proof accounting, which were taken into account in the design of the UFHO sales module. The public transport companies can also easily and quickly adjust the cash register interface with the layout editor.

DESSAUER VERKEHRS GMBH RELIES ON THE AMCON ADVANCE SALES' SYSTEM

Dessauer Verkehrs GmbH has been working with the AMCON UFHO advance sales' system (VVK) since 2014. Three ticket machines with two to three cash drawers each were implemented. Employees can log in with a Dallas key and the UFHO system automatically assigns one of the cash drawers to the user, which allows several employees to work simultaneously at one cash register.

In addition, the advance sales' systems have an integrated receipts printer and an external ticket printer. By connecting to an EC cash device, card payment is possible at any time as well.

Altogether, three different rates are supported by the Dessauer Verkehrs GmbH advance sales systems: the house rate, the Anhalt-Bitterfeld-Wittenberg rate, and tickets for the Dessau-Wörlitzer train. In addition to the sale of timetables and souvenirs, natural gas is also sold through the advance sales' system. The kilograms, designation, and amount are entered and transferred directly to the UFHO background system. The customer then receives a receipt with all relevant data for their accounting. Revenues from the penalty fares are also processed in the UFHO, which means that passengers are able to pay all or part of their penalty fares directly to the advance sales' office. The revenues are also transferred directly to the UFHO background system, where they can then be further processed with minimal effort.
